INSTRUCTIONS FOR WASHING KNITTED AND EMBROIDERED HANDICRAFTS

Mouline Ljubica threads

Regardless of the fact that our threads carry the label "HIGH COLOR WASHING FASTNESS", staining or bleaching of the handicraft may occur if we do not strictly follow the following instructions:

- Handicrafts items should be washed separately from other laundry
- Pre-wash should be done in plenty of water and well-dissolved detergent, and then rinse well
- Boiling at 90 celsius should also be done in a lot of water, so that individual pieces can move freely, therefore, they must not press each other. Boiling should not be done in a closed pot, and washing agents should be used according to the manufacturer's instructions.
- Rinsing should be done immediately in plenty of water, be sure to centrifuge, and then hang the handwork out to dry
- If there is no possibility to immediately hang the handicrafts to dry, they should be left soaked in water, and they must not remain wet with other clothes/textiles.

If, despite of this careful washing, the fabric becomes colored, boiling and washing should be repeated.

As far as light fastness is concerned, our threads fully meet this requirement. However, if the handicrafts are displayed next to a window or similar where there is a combined influence of sunlight and dust, the color may fade.

Therefore, we recommend more frequent replacement of handicrafts in such places.

Fading of colors and damage to handicrafts can also occur with the use of products containing CHLORINE (such as Varikina), which is why such products must not be used under any circumstances.

Not only the highest quality dyestuff but also the most careful handling are a guarantee of maintaining the highest possible quality of fastness.

High color washing color fastness is guaranteed by "Unitas" thanks to many years of experience.
